TITLE: Function of humidity in the analysis of showers and thunderstorms

SOURCE: Zeitschrift fur meteorologie, v. 18, no. 5-7, 1966, 268-272

TOPIC TAGS: atmospheric humidity, storm, atmospheric phenomenon

ABSTRACT: **Thermodynamical, electrical, and cloud-physical factors were related to the incidence of showers and thunderstorms with the aim of establishing the criteria for the development of these meteorological phenomena. An especial significance of atmospheric humidity and of its vertical gradient was indicated and it was shown that this gradient may be correlated to the electric-charge concentration in a vertical direction. Data** were presented to illustrate the relationships described. Orig. art. has: 5 figures. [JPRS: 36,844]

MAKAI, E.

Makai, E. Eine Eigenwertabschätzung bei gewissen Differentialgleichungen zweiter Ordnung. Mat. Fiz. Lapok 48, 510–532 (1941). (Hungarian. German summary)

Let $\rho(x)$ be positive and have a second derivative continuous in stretches in $a \leq x \leq b$. We denote by λ_n and λ_n' the nth characteristic values of the differential equation $y'' + \lambda\rho(x)y = 0$ with the boundary conditions $y(a) = y(b) = 0$ and $y'(a) = y'(b) = 0$, respectively. According to a classical result of Liouville,

$$\lambda_n \sim \lambda_n' \sim \left| \pi n \Big/ \int_a^b |\rho(x)|^{\frac{1}{2}} dx \right|^2 = \Lambda_n, \qquad n \to \infty.$$

The author assumes, in addition to the conditions mentioned, that $\rho\rho'' - \rho'^2 \leq 0$ (this condition is satisfied if ρ is convex from above). Then $\lambda_n < \Lambda_n$. Similarly if $\rho\rho'' - \rho'^2 \geq 0$ we have $\lambda_n' < \Lambda_n$. Under the same conditions the following inequalities hold:

$$\lambda_n' < ((n+1)/n)^2 \Lambda_n, \quad \lambda_n < ((n+1)/n)^2 \Lambda_n,$$

respectively. As an application, bounds for the zeros of Hermite polynomials are obtained.

Makai, E. On a monotonic property of certain sturmliouville functions. Acta Math. Acad. Sci. Hungar. 3, 165-172 (1952) (Russian summary)

Let $x_{\nu k}$, $k=1,2,3,\ldots$ denote the non-negative zeros of $J_\nu(x)$, $\nu > -1$. R. G. Cooke [J. London Math. Soc. 12, 180-185 (1937)] has proved in a rather lengthy way that

the areas

$$\left| \int_{x_{\nu,k-1}}^{x_{\nu,k}} J_\nu(x)\,dx \right|$$

are increasing with k. The author presents a surprisingly elegant proof for the case $|\nu| > 1/2$ using Sturm's comparison theorem in a proper way. The same method is used in order to prove analogous properties of the Hermite and Legendre polynomials.

G. Szegő (Stanford, Calif.).

Makai, E. On the inequality of Mathieu. Publ. Math. Debrecen 5 (1957), 204–205.

Die Ungleichung $\sum_{n=1}^{\infty} 2n/(n^2+x^2)^2 < 1/x^2$ die von E. Mathieu [Traité de physique mathématique, t. VI–VII. partie 2, Gauthier-Villars, Paris, 1890] vermutet, von K. Schröder [Math. Ann. 121 (1949), 247–326; MR 12, 185] und von O. Emersleben [ibid. 125 (1952), 165–171; MR 14, 369] teilweise, von L. Berg [Math. Nachr. 7 (1952), 257–259; MR 14, 731] und von J. G. van der Corput und L. O. Heflinger [Nederl. Akad. Wetensch. Proc. Ser. A. 59 (1956), 15–20; MR 17, 949] mittels mehr schwierigen analytischen Hilfsmitteln vollständig bewiesen wurde, wird hier so einfach gewonnen, dass in diesem Referat der ganze Beweis wiedergegeben werden kann: Es wird die evidente Ungleichung $[(n-\frac{1}{2})^2+x^2-\frac{1}{4}]^{-1} - [(n+\frac{1}{2})^2+x^2-\frac{1}{4}]^{-1} > 2n/(n^2+x^2)^2$ bezüglich n von 1 bis ∞ summiert. Mit derselben Methode wird auch die anderseitige Abschätzung $\sum_{n=1}^{\infty} 2n/(n^2+x^2)^2 > 1/(x^2+\frac{1}{4})$ bewiesen, die für $x^2>5/6$ schlechter, für $x^2<5/6$ dagegen besser ist als die untere Abschätzung $\sum_{n=1}^{\infty} 2n/(n^2+x^2)^2 > 1/x^2 - 5/(16x^4)$ von O. Emersleben. *J. Aczél* (Debrecen).

Makai, E. On a maximum problem. Acta Math. Acad. Sci. Hungar. 9 (1958), 105–110.

Put $P(z)=\prod_1^n (1+u_i z)$, $(P(z))^{-1}=\sum_0^\infty b_i z^i$, $h_m(z)=(-1)^{m+1}(1-P(z)\sum_0^m b_i z^i)$. The author wants to estimate the maximum K_{mn} of $\int_0^{2\pi} |h_m(e^{i\theta})|^2 d\theta$ under the condition that $|u_1|\leqq 1, \cdots, |u_n|\leqq 1$. He shows that the coefficients of the polynomial $h_m(z)$ are symmetrical functions of $u_1, \cdots, u_n$ with non-negative coefficients. It follows that the maximal value of the integral is attained if $u_1=\cdots=u_n=1$. In this case the coefficients of $h_m(z)$ can be evaluated explicitly, and so an elementary expression for K_{mn} can be derived. Some simpler upper and lower bounds for K_{mn} are given. *N. G. de Bruijn* (Amsterdam)

Investigation of the copolymerization of unsaturated polyesters and styrene or methyl methacrylate by measuring shrinkage. Ibolya Vancsó and Etelka Makai. Szerves Vegyipari és Műanyagipari Kutató Int., Budapest, Hung. *Magyar Tudományos Akad. Kém. Tudományok Osztályának Közleményei* 11, 445–53(1959).—The extent of polymerization is detd. by measuring shrinkage in a Schulz dilatometer (cf. Schulz and Harborth, C.A. 41, 5752b). Diethylene glycol maleate and sebacate are copolymerized with styrene (I) and Me methacylate (II). Unsatn. promotes polymerization. The nature of the initiator-activator system (Bz_2O_2) greatly influences the reaction. II had much smaller copolymerization ability with polyesters than I. The Trommsdorf effect (cf. Trommsdorf, *et al.*, C.A. 42, 6578b) was valid in the above cases. T. E. Muller
